Hiring Team
Opus Agency

Dear Hiring Team,

I'm applying for the Graphic Designer role at Opus Agency. Environmental branding, production-ready signage, and immersive brand experiences sit squarely in the intersection of what I've been building toward: a design practice grounded in print production, brand systems, and the detail work that holds up at large format.

My background spans 6+ years of freelance design across brand identity, print production, and motion graphics, supported by a B.S. in Graphic Information Technology from Arizona State University. I'm fluent in the full Adobe Creative Suite (Illustrator, Photoshop, InDesign) and Figma, with hands-on experience preparing production-ready files for real print runs. I designed a large-format banner for Macro-Pro, Inc. and a multi-piece office poster series through Allegra, a San Antonio print company. Both required precise spec adherence, color accuracy, and clean handoff for production. That attention to file integrity carries directly into the environmental and signage work Opus produces.

Brand cohesion across physical and digital channels is something I care about deeply. Whether I'm developing a visual identity system for a small business, building logo and banner packages for content creators, or creating print and virtual marketing materials for a community launch, I'm thinking about how assets live together across contexts. That systems-level thinking is what I'd bring to Opus's event environments, making sure every touchpoint from signage to slide decks holds the brand at the right fidelity. My motion graphics work in After Effects adds another layer for the multimedia and presentation design needs your team handles.

I work remotely, deliver on time, and I'm comfortable collaborating with creative directors on fast-moving projects. My portfolio is at averyemberday.com.

Thank you for your time and consideration.

Sincerely,

Avery Ember Day
