

A History of Mistrust:

Why Some Communities
Struggle to Trust Doctors

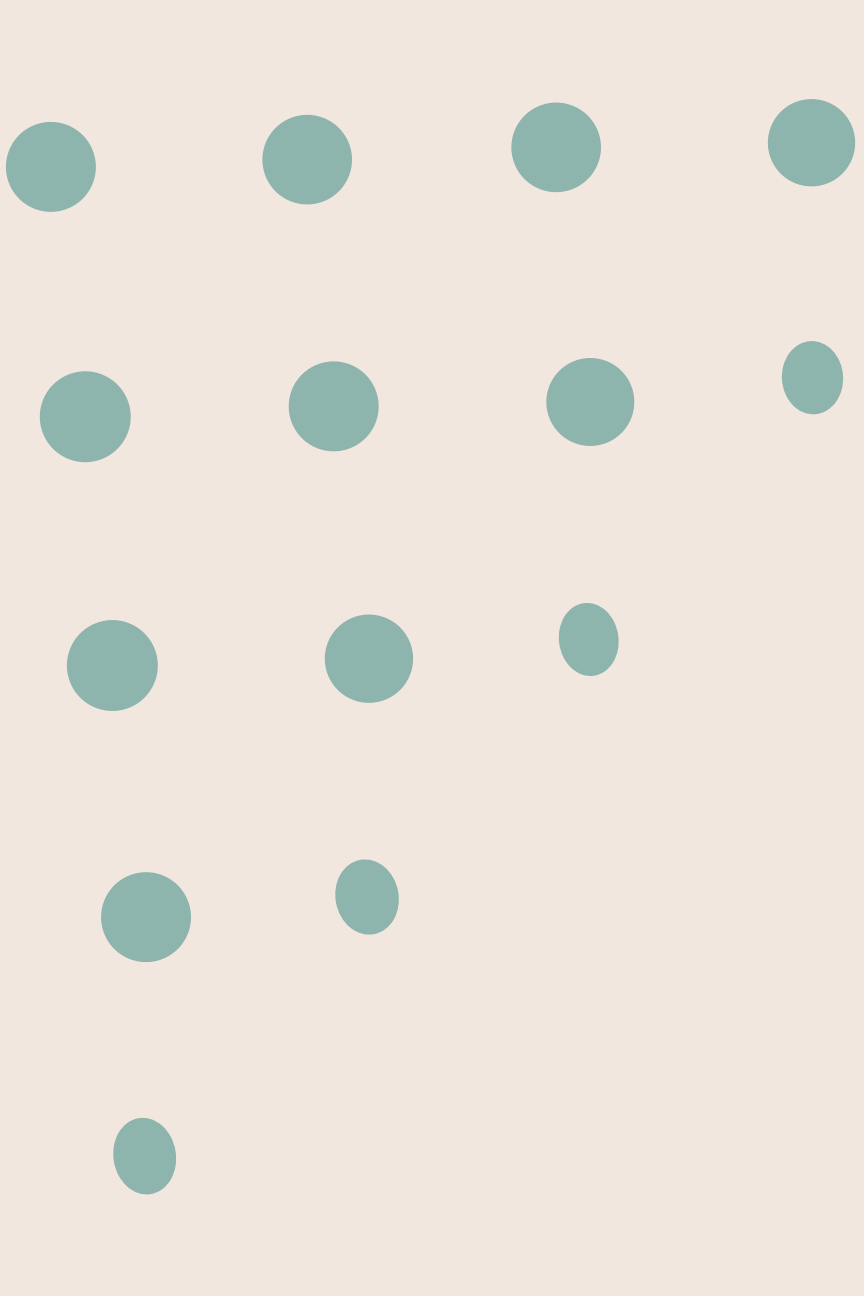

The image features a central graphic consisting of two concentric circles. The inner circle is a muted teal color, and the outer ring is a vibrant orange. The text is arranged within and around these circles. In the top-left corner, there are orange L-shaped brackets. Along the right edge, there is a vertical column of teal dots. At the bottom, there are more orange L-shaped brackets and a horizontal line. The overall design is modern and clean.

POC & LGBTQ+ individuals

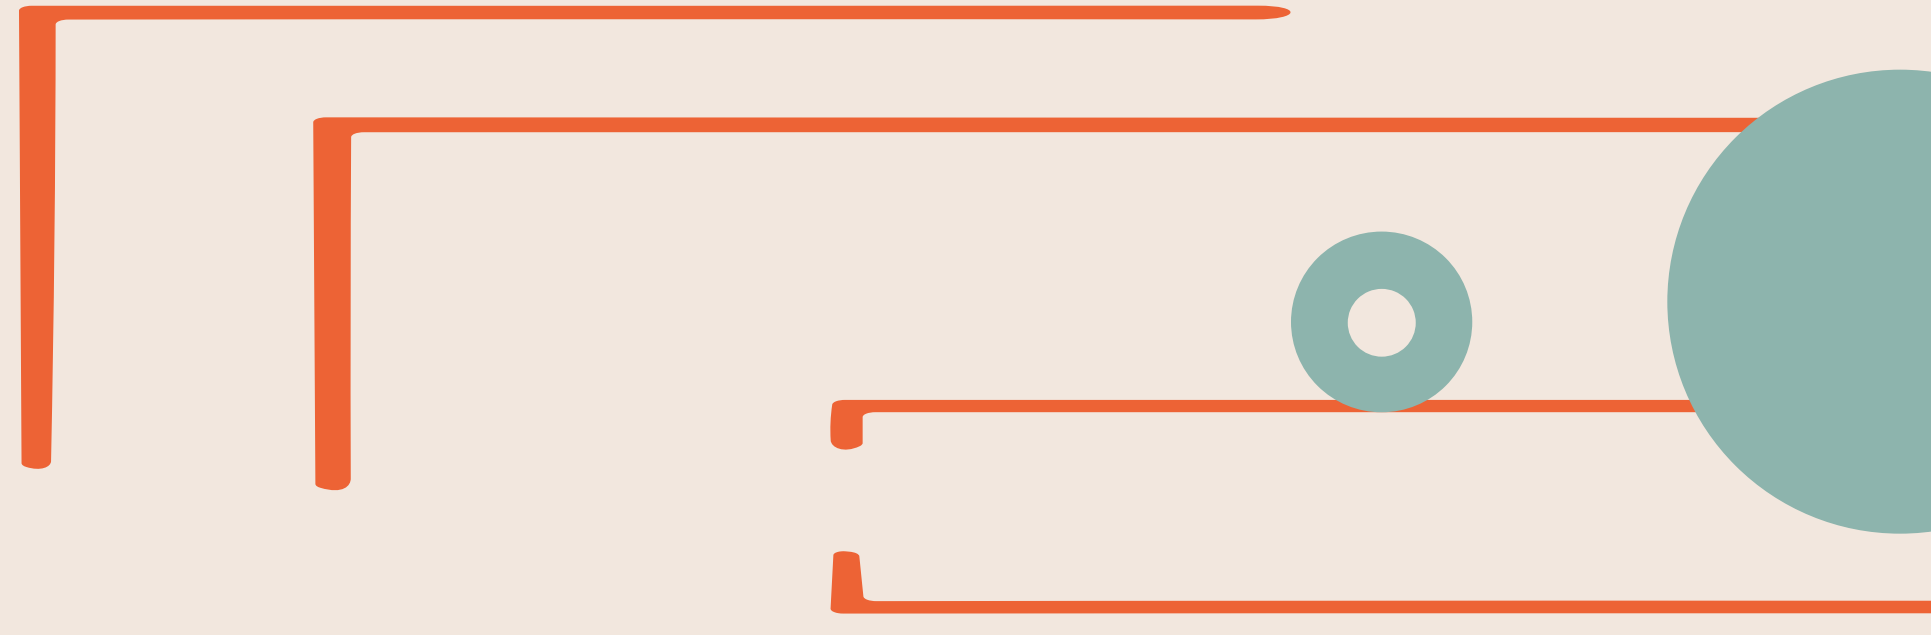

often face

**systematic
discrimination**

when seeking healthcare.

Tuskegee Experiment (1932-1972):

**American healthcare providers lied to and
denied Black men treatment for Syphilis to
study the progression of the disease,**

even after a widespread cure was developed.

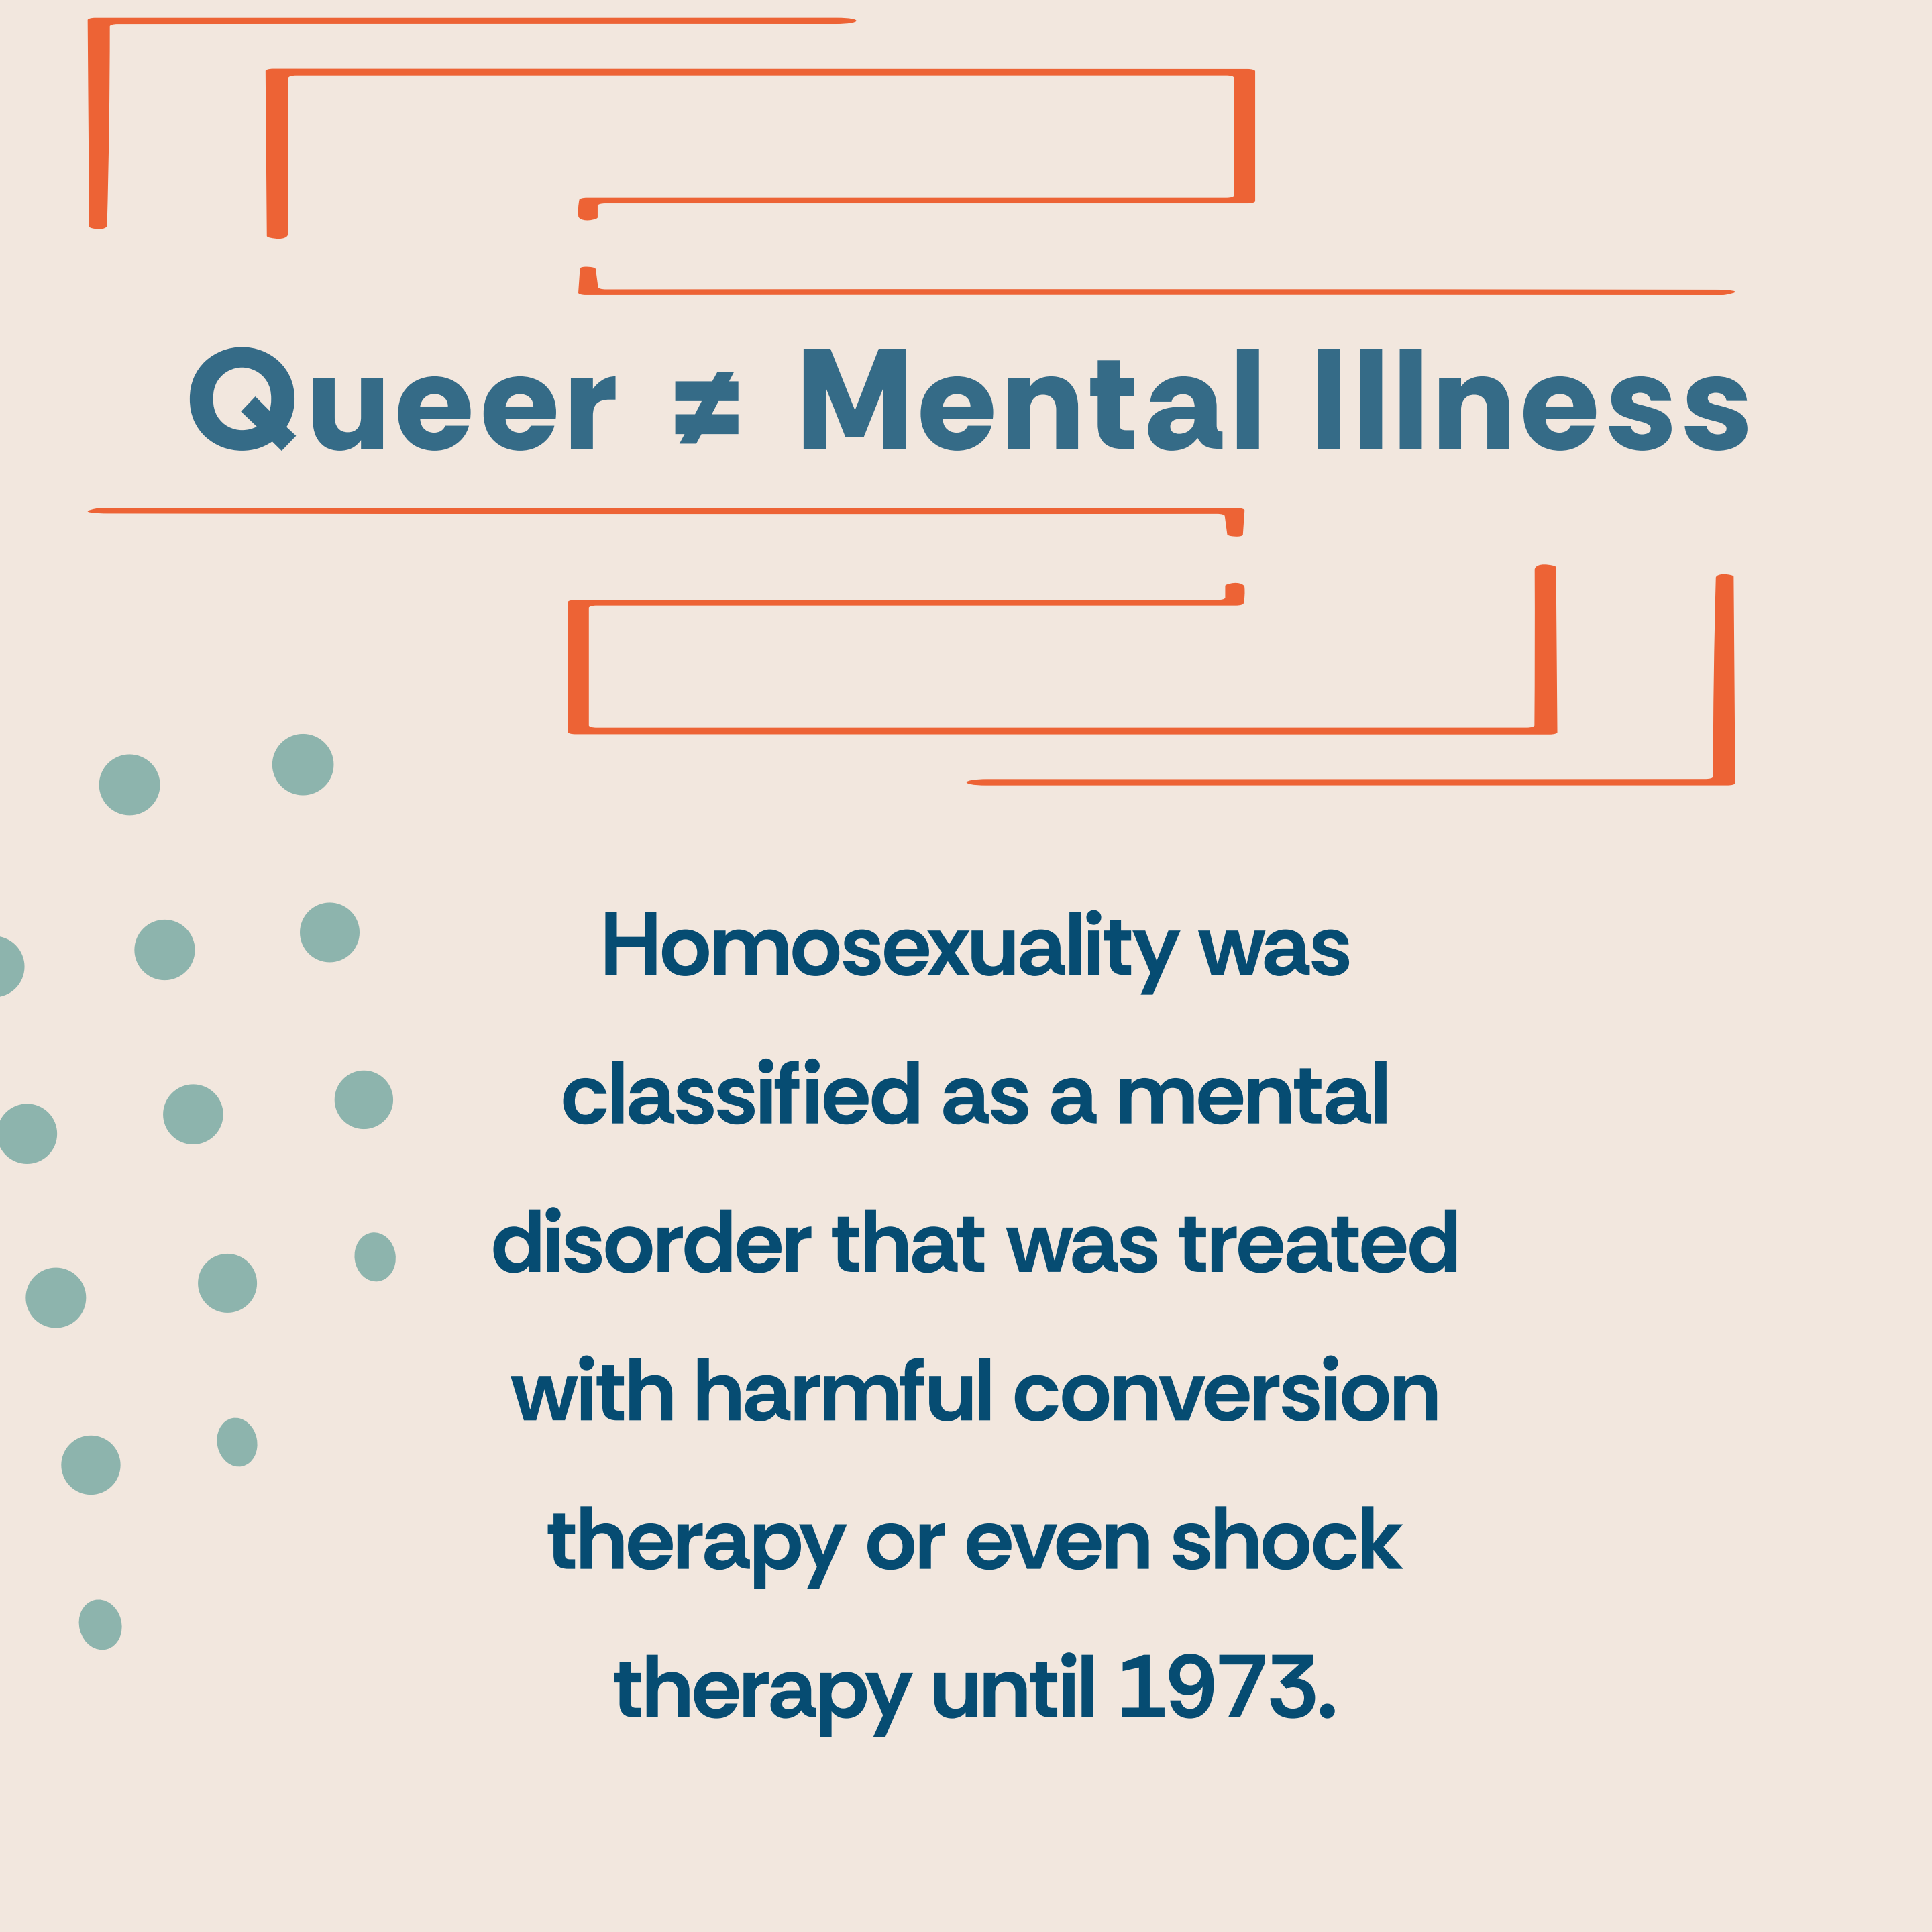

Black, Indigenous, and Latinx

Women have been

**sterilized
without
consent**

well into the 20th century.

The slide features a light beige background. At the top, there are several nested orange L-shaped lines of varying sizes. On the left side, there is a vertical column of teal-colored dots of different sizes. The main title is centered in a large, bold, blue font.

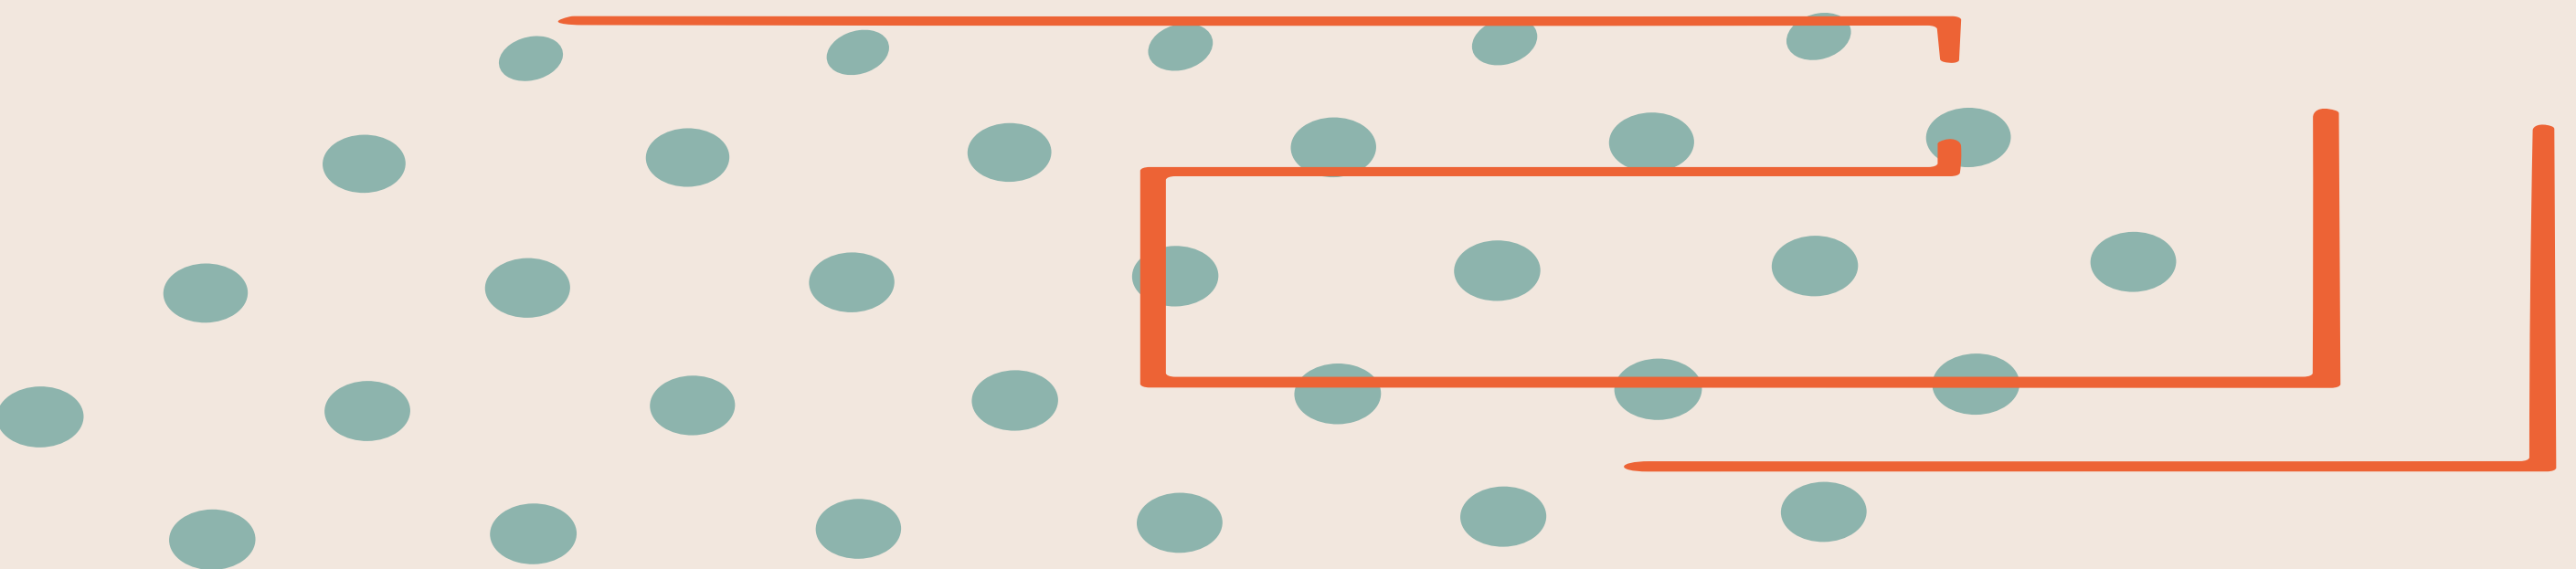

Queer ≠ Mental Illness

**Homosexuality was
classified as a mental
disorder that was treated
with harmful conversion
therapy or even shock
therapy until 1973.**

HIV/AIDS Crisis

**The US Government's slow
response disproportionately
harmed LGBTQ+ & POC
communities.**

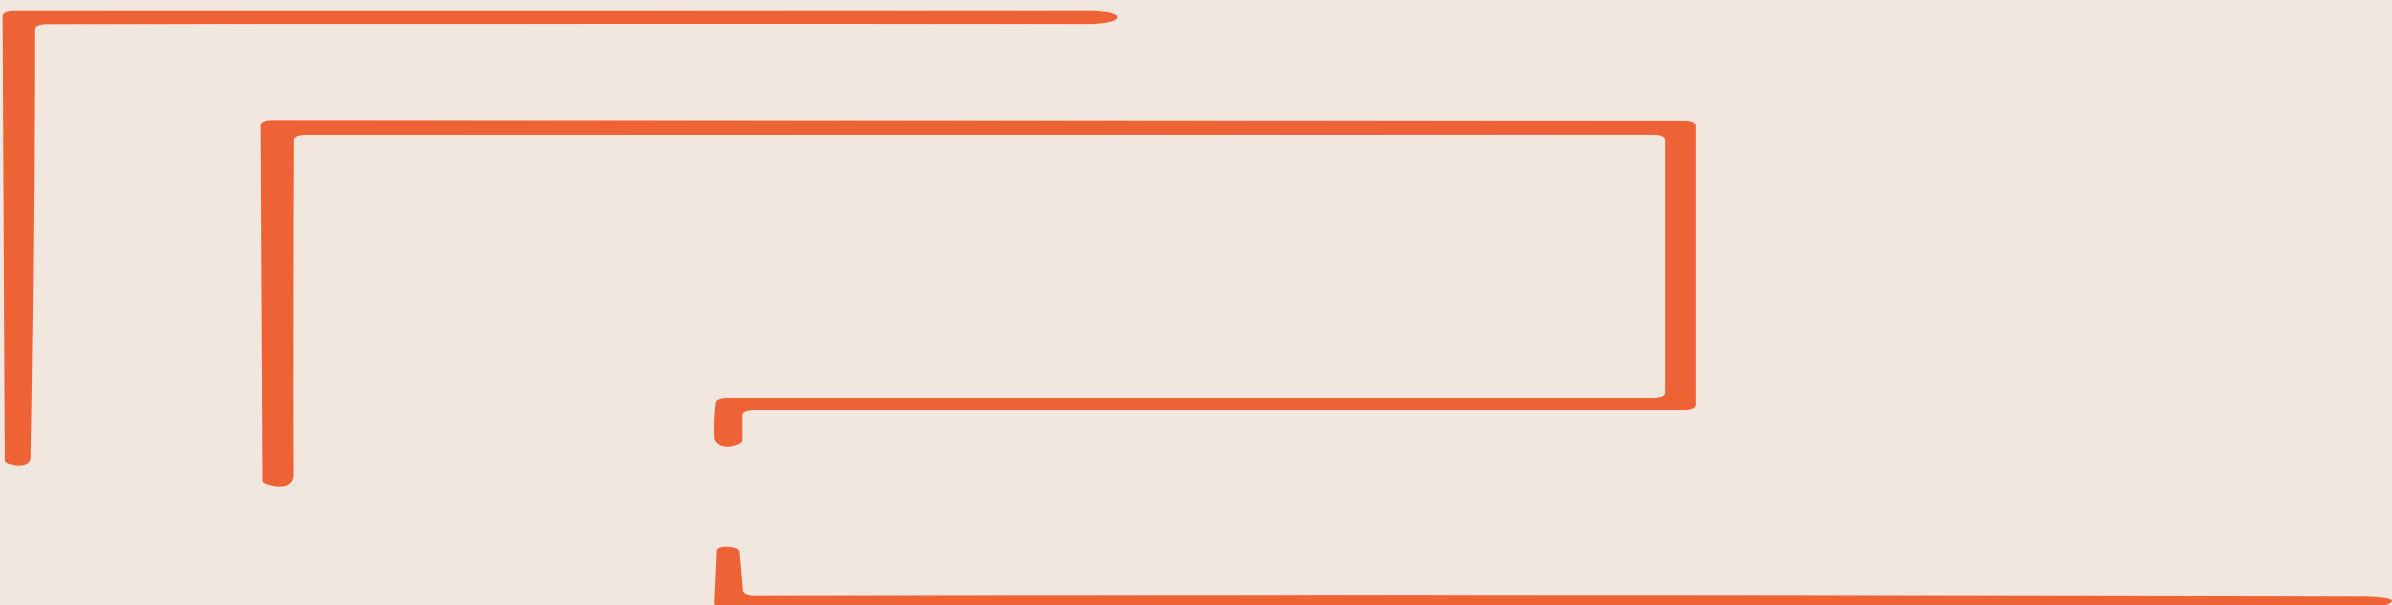

**Today, many POC
and LGBTQ+
individuals still
distrust medical
providers.**

Mistrust leads to:

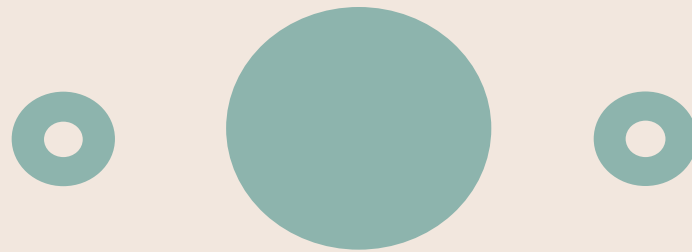

- **Late diagnoses**
- **Poorer mental health**
- **Non-adherence to necessary treatment**
- **Higher mortality rates**

“Health is more than the absence of disease. Health is about jobs and employment, education, the environment, and all of those things that go into making us healthy”

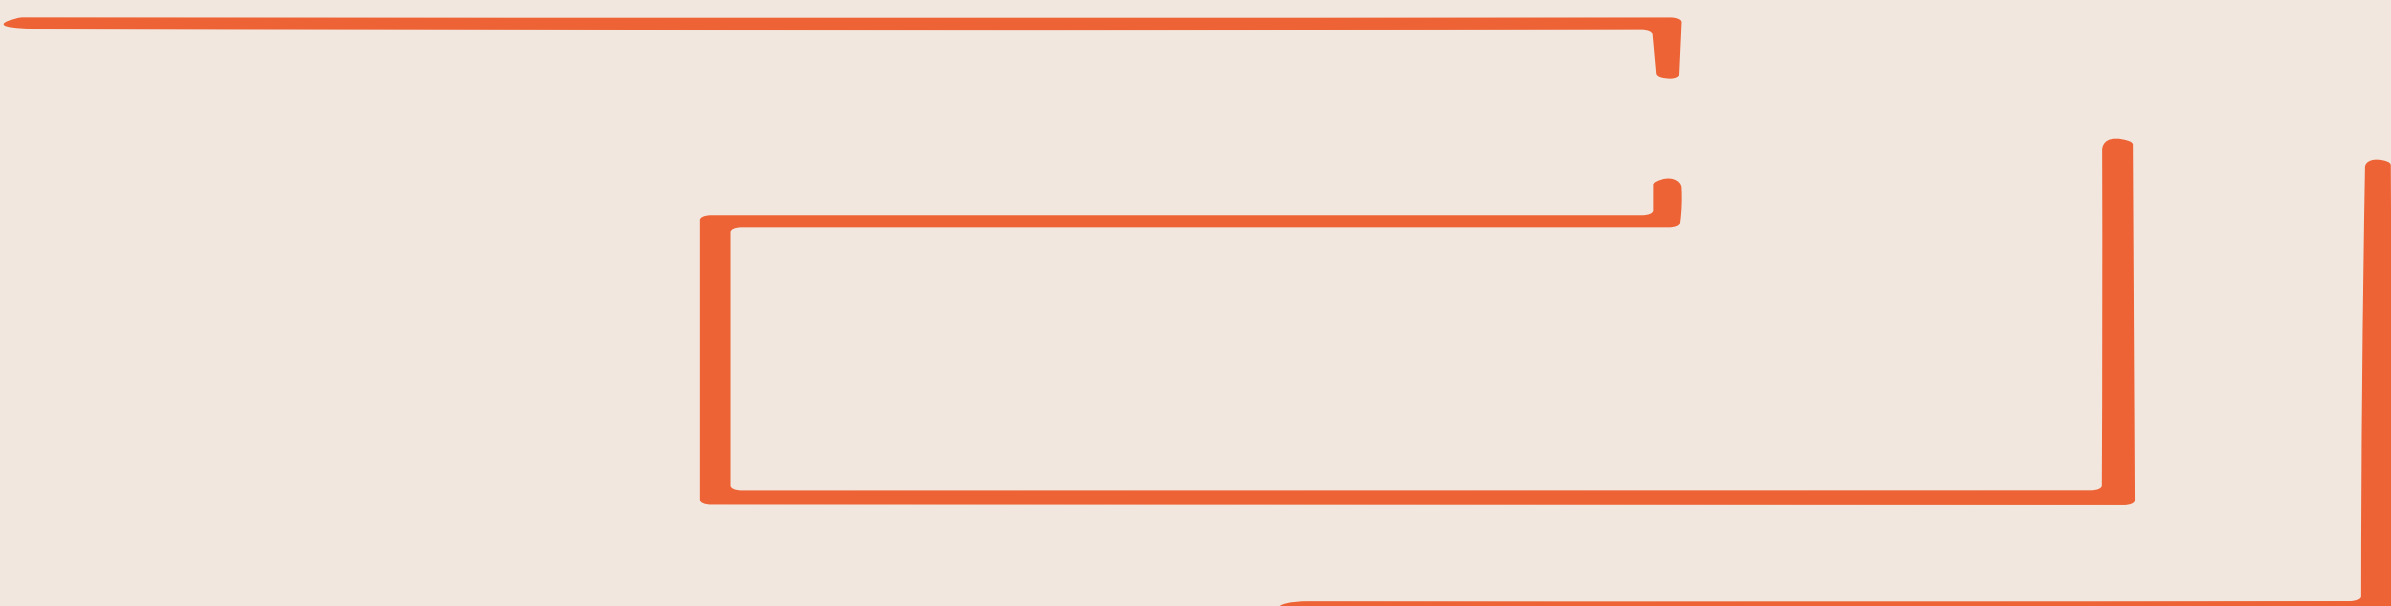

-Dr. Joycelyn Elders

**Advocate for inclusivity training
for all healthcare providers.**

**We need to rebuild that
trust.**

AIDS Care in Marginalized Communities

**Anyone who is sexually active
could be at risk for sexually
transmitted diseases or infections.**

**However, Black & Latinx
individuals are 3x more likely to
contract HIV. LGBTQ+
individuals are even more likely.**

Why?

**Systematic barriers
prevent access to life
saving treatments like**

PREP

- 
- **High costs**
 - **Access to healthcare**
 - **Stigma & discrimination**

all contribute to these disparities

**LGBTQ+ people and
POC often receive
inferior treatment and
face dismissal of
symptoms.**

**This discrimination
leads to avoidance of
crucial treatment.**

**This avoidance and
mistrust directly causes
later diagnoses
&
worse health outcomes.**

**This mistrust is not
without good reason.**

**The AIDS crisis
emerged in the early
1980's, claiming the
lives of**

39 million people worldwide.

Do your part:

- **Get yourself tested**
- **End the stigma behind STDs**
- **Educate yourself**
- **Encourage your loved ones to get tested**

The background features a light beige color with abstract orange and teal shapes. At the top and bottom are two horizontal wavy orange lines. In the center, a large, irregular teal shape contains the text. To the left and right of this teal shape are orange circular outlines, some of which are partially cut off by the edges. A large orange arc is positioned behind the teal shape, and a smaller orange circle with a solid center is located in the bottom right corner.

**With the right response, we can
end the HIV epidemic in America.**

Rebuilding Trust Between

Marginalized Communities

& Healthcare Providers

**Rebuilding trust is
critical to closing
the gap in medical
care for
marginalized
communities**

Community-led Clinics

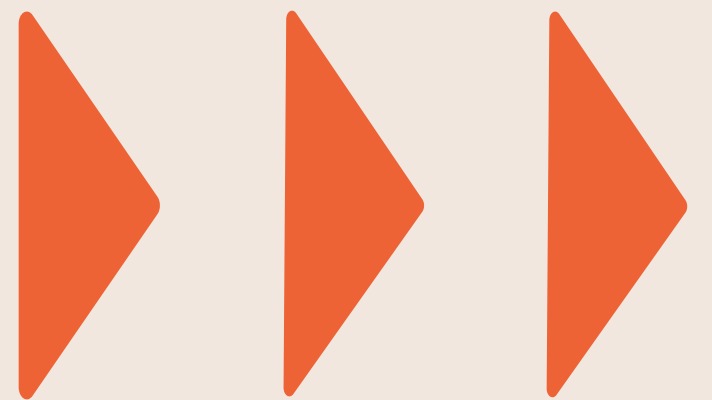

**Clinics run by LGBTQ+
& POC provide safe,
affirming care.**

Representation Matters

**Patients trust providers
who reflect their race,
culture, & experiences.**

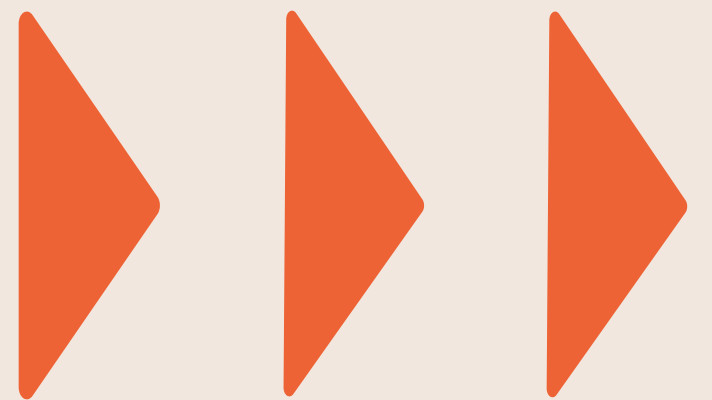

How Do We Start?

Cultural Competency

**Training doctors and nurses to
understand diverse experiences
is key to changing how
marginalized people receive care.**

Advocacy & Policy

**We need policies that require
inclusive care and punish
discriminatory practices
enforced in healthcare systems.**

**“We do have the
power, if we come
together, to make
change.”**

**–Dr. Karthik
Sivashanker**

**Policy changes and
community support are
needed to ensure**

inclusive healthcare for all!

We need:

- **inclusive**
- **affordable**
- **acesable**
- **culturally competent**

healthcare to build trust.
